RE Application for the *Legal Engineer* role

*Dear Ms Craciun,*

I am applying for the Legal Engineer position at Wolters Kluwer Libra. I see this role as an ideal combination of three areas I have been developing for many years: law, through my legal studies and professional experience in law firms and at Wolters Kluwer Czech Republic; the structuring of expert legal knowledge; and practical work with AI tools.

My professional profile combines nine years of legal practice across several law firms of different sizes and specializations with seven years as an in-house legal book editor in the legal division of Wolters Kluwer Czech Republic, followed by ongoing freelance cooperation with WK. As a result, I can bring the following value to the Libra team:

- ✓ Expert knowledge of the WK ecosystem: For seven years, I worked in the legal division, editing legal books and workflow-oriented legal navigators in areas such as IT law, financial law, intellectual and industrial property law, and civil procedure. I am familiar not only with the final products in ASPI, but above all with the process by which legal know-how is transformed from unstructured legal content into a structured and digitally usable format.
- ✓ Deep user insight: Nine years across five law firms of different sizes taught me where lawyers actually lose time — and where AI can give it back. I understand what makes conservative legal users hesitate, and what they treat as non-negotiable value.
- ✓ Technology and AI prototyping: Over the past two years, I have been working hands-on with AI tools — not just learning about them, but building with them. This is not merely a theoretical interest: I actively design and build websites, interactive checklists and simple applications using AI-assisted development tools, HTML/CSS/JavaScript, GitHub and Vercel.

My strongest asset is connecting the slow, careful world of law with the fast-moving world of AI and making them speak the same language. A high-quality legal AI assistant is not built on the model alone, it depends on carefully prepared context and the structure of legal information. That is exactly what I have been doing at Wolters Kluwer for almost a decade, just in a different form.

I have built a short digital portfolio for this application — libra-kohl.vercel.app — summarizing my relevant projects, my understanding of the Legal Engineer role, and examples of how I think about legal content and AI-powered tools. The page itself is also a working sample of how I approach content in a digital, user-oriented context.

I would welcome the opportunity to discuss how my profile fits the team.

Kind regards,

*Kateřina Mlsnová*
